

Partner Briefing

Pre-meeting intelligence that assembles itself — and arrives before anyone asks.

THE REFRAME

Not a document problem — a fragmentation problem. The context already exists; it's scattered across five systems and stitched by hand, the morning of. So the brief should assemble itself and land in Slack the day before — with a human in the loop.

Today

- ✗ Staffer manually queries Salesforce, email, Slack, docs & web — one by one
- ✗ Done the morning of, under time pressure
- ✗ ~30–45 min per meeting; quality depends on who does it
- ✗ Knowledge trapped in one person's head

With Partner Briefing

- ✓ Triggers off the calendar event — no one runs anything
- ✓ Brief waiting in Slack the day before
- ✓ ~2 min to read; consistent structure every time
- ✓ Human reviews & refines; corrections tune the agent

ARCHITECTURE

WHAT MAKES IT TRUSTWORTHY

- Provenance** — every claim cites its source (Salesforce / email / Slack / docs / web). Real vs. illustrative data is labelled in the UI.
- Confidence flags** — the agent surfaces what's thin or stale instead of bluffing. It admits what it doesn't know.
- Human-in-the-loop** — the agent drafts; a person signs off. Corrections feed back and tune future briefs.
- Respects permissions** — only surfaces what the viewer can already access. Never widens access.

IMPACT

5→1

Systems collapsed into one brief

~40min

Manual prep saved / meeting

Day -1

Proactive, not morning-of

↓ edit-rate

North-star: trust over time

HOW I'D SEQUENCE IT — 90 DAYS

WK 1–3

Shadow + map
Sit with 3–4 staffers; map what they pull & where it breaks. Validate before building.

WK 3–6

Thin slice
Salesforce-only briefs for one team. Prove the structure earns trust.

WK 6–10

Add sources + Slack
Layer email, Slack, web. Ship AgentForce → Slack delivery + feedback loop.

WK 10–13

Measure + expand
Track adoption, time saved, edit-rate. Roll out as briefs need fewer corrections.

Built with **Claude Code** — shipped on a feature branch, merged via pull request. The workflow is the artefact too.

github.com/valeriosantoni7-lang/wef-partner-briefing · PR #1

Maps to the role: workflow transformation (reframe + 90-day plan) · Salesforce ownership (data model & custom objects) · AgentForce ↔ Slack business logic (agent + integration spec) · AI-assisted building (Claude Code + PR) · data-informed decisions (edit-rate metric)
